Education

Newton School of Technology

University Degree | 2023 - Present

CGPA: **7.4**

Projects

Hospital Readmission Rate Analysis

View Repo

Tools: Tableau Python (Pandas) EDA

- Analyzed hospital readmission rates using a dataset from 130 US hospitals to identify clinical and demographic factors influencing 30-day readmissions.
- Leveraged **Python (Pandas)** for end-to-end data extraction, cleaning, and standardization of complex healthcare data.
- Conducted in-depth **Exploratory Data Analysis (EDA)** to uncover patterns in patient demographics and medication changes.
- Developed interactive **Tableau** dashboards to visualize readmission trends, providing actionable insights for hospital resource management.

Uber Data Analysis

View Repo

Tools: Tableau Data Processing

- Showcased a comprehensive analysis of over 50,000 Uber trips using Tableau to provide deep insights into trip statuses across major cities, fare distributions, and passenger demographics.
- Processed and structured raw CSV data to aggregate meaningful bins and hierarchies for detailed geographic and categorical analysis.
- Developed interactive live dashboards detailing proportion of completed versus cancelled trips, revenue generation, and rider engagement.
